## Terry-Lined Heavy-Duty Neoprene Gloves

#NE240TKL

Gloves will tolerate  
brief exposure to flame.

Heavy-duty neoprene gloves feature acrylic terry lining for thermal insulation. Diamond-grip finish on palms for increased wet/dry grip.

Neoprene, is the DuPont™ trade name for chloroprene, was the first commercial synthetic rubber created. It has good abrasion, cut and even heat resistance, which makes it a great choice for working in both the food industry (deep fryers) and the petrochemical industry, with heat stability up to 93°C (200°F). This makes gloves suitable for hot/cold liquid applications as well, perfect for steam applications like autoclaves or any situation where intermittent contact up to 400°F occurs. (The time to pain at 200°C/392°F is 16 seconds. Not recommended for use above 260°C/500°F.) Note: gloves will tolerate brief exposure to flame, but are not recommended for use around open flame.

Neoprene resists the effects of aging, sunlight, ozone, oxidation and weather, as well as a broad range of oils and chemicals that attack natural rubber gloves like acids, caustics, oils, grease, and many solvents.

### TESTIMONIAL

"These are fantastic gloves. they're really comfortable, fit well, thick, and were great for dealing with dangerous chemicals." - Ian Hickson

**CHEMSTOP**

### FEATURES

- Resists a wide range of chemicals, and aging/breakdown
- Good puncture and abrasion resistance
- Offers heat stability up to 93°C (200°F)
- Good for hot/cold liquid applications; intermittent contact up to 400°F
- Acrylic terry lining protects hands against thermal contact
- Diamond-grip finish palms for increased grip

### APPLICATIONS

Chemical Processing  
Commercial Fishing  
Food Processing  
General Industry  
Oil Refineries  
Petrochemical  
Degreasing  
Refining  
Plating  
Galvanizing

### AVAILABLE SIZES
