

SnowForce™ | 635CRYO

Waterproof protection for handling extremely cold cryogenics

ABOUT THE PRODUCT

Designed for use around cryogenics, these waterproof gloves are insulated with 3M Thinsulate™ which allows them to withstand contact with dry ice for 267 seconds. RaoTex™ inserts prevent cryogenics from soaking through to the skin and act as an added insulator, trapping body heat while allowing moisture to escape. An extended cuff increases the area of protection while a looser fit allows for easy removal in the event of contact with cryogenics.
