

levittsafety

CANADA'S LARGEST Supplier of VEHICLE FIRE SUPPRESSION SYSTEMS

WHAT YOU CAN EXPECT:

- Access to all leading manufacturers which means you get the system that's exactly right for you.
- The largest national network of service technicians with branches across Canada to install and service your systems, even in remote areas.
- Manufacturer-certified technicians are continually trained to ensure you remain compliant and all of your systems adhere to the manufacturer specifications.
- With the most vehicle fire suppression inventory in Canada, we are able to provide competitive pricing and short lead times — getting you back to work sooner.

FROM CONCEPTION TO COMPLETION,
we ensure your project is finished on time and on budget.

Are you looking for a new vehicle fire suppression system or a provider to service your existing one?
With branches across Canada, our team of fire safety experts can help!

WHAT WE OFFER:

CONSULTATION: With more than 50 years experience in the fire suppression business, we've established a national network of expertise.

A Levitt-Safety vehicle fire suppression specialist will visit your site to determine your hazards, the scope of your project and the correct system for your application.

Our in-house experts then provide standardized designs for most systems, which adhere to manufacturer specifications.

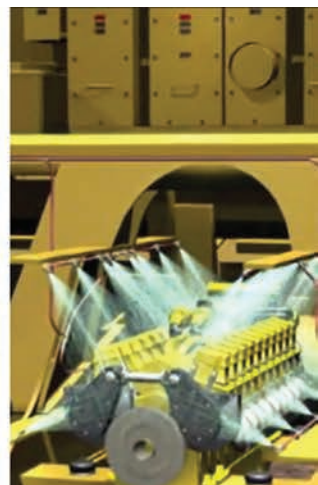

INSTALLATION: Once you have approved the system, our highly-trained manufacturer-certified technicians will install it to manufacturer specifications.

Detailed AutoCAD drawings can be provided to complement the install and provide you with a permanent record of the system design. This makes servicing simple and provides a roadmap for any future installs.

SERVICING NEW OR EXISTING SYSTEMS: Levitt-Safety will book and perform any routine preventative maintenance required for your system.

Whether it's for a new or existing VFSS, we fully support any unplanned interruptions and get your machinery back up and running as soon as possible.

*Ask us how monthly **PROFORMA** reporting works to document VFSS performance and unscheduled events. Through expert analysis, you can improve the reliability of your heavy equipment and improve your bottom line.*
